Executive Summary

This document serves as the formal confirmation that the GenDAI consortium has fulfilled the requirement outlined in Deliverable D9.3. Following a change in methodology to use a pre-existing, fully anonymized dataset instead of prospectively collecting samples, no further techniques of the anonymization/ pseudonymisation will be implemented.

**Funded by
the European Union**

1 Relevance

The consortium has agreed to use pre-existing, fully anonymized dataset instead of prospectively collecting samples.

Should the procedure nevertheless need to be adapted, because further data sets are required, the consortium would announce the anonymization/pseudonymisation techniques in good time with an update of this deliverable.

The Ethical Advisor is informed about this and agrees.
